2025

Dear friends!

Development of healthcare is a strategic task of any country.
The successful solution of which is in the format of public-private partnership.

As part of a public-private partnership, an international group of medical companies MEDMA has already opened more than 80 clinics of various profiles in several countries.

Despite the significantly changing economic conditions, in 2020-2024 MEDMA is planning to open new centers in several areas of its activities: oncology, dialysis, cardiology, reproductive health, and laboratory research.

We are determined to work in all, even the most distant regions of Russia.
We consider cooperation with the countries of the near abroad to be a promising vector.

I am convinced that medical care in the Russian Federation and the former CIS countries must and will comply with the most advanced international standards.

Yulay Magadeyev

President of International Medical Group Companies MEDMA
